SPP Code : SPL-CV-172

Collected On : 04-Oct-2023 10:32 AM Received On : 04-Oct-2023 12:45 PM

Reported On : 04-Oct-2023 02:53 PM

Report Status : Final Report

## **CLINICAL BIOCHEMISTRY**

| Test Name | Results | Units | Ref. Range | Method |
|-----------|---------|-------|------------|--------|

**Glucose Fasting (F)** 110 mg/dL 70-100

Interpretation of Plasma Glucose based on ADA guidelines 2018

| Diagnosis   | FastingPlasma<br>Glucose(mg/dL) | 2hrsPlasma<br>Glucose(mg/dL) | HbA1c(%) | RBS(mg/dL)           |
|-------------|---------------------------------|------------------------------|----------|----------------------|
| Prediabetes | 100-125                         | 140-199                      | 5.7-6.4  | NA                   |
| Diabetes    | >= 126                          | >= 200                       | ll I     | >=200(with symptoms) |

Reference: Diabetes care 2018:41(suppl.1):S13-S27

**Glucose Post Prandial (PP)** 

168

mg/dL

70-140

Hexokinase (HK)

Interpretation of Plasma Glucose based on ADA guidelines 2018

| IIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIII | 3       | 2hrsPlasma<br>Glucose(mg/dL) | HbA1c(%) | RBS(mg/dL)           |
|---|---------|------------------------------|----------|----------------------|
| Prediabetes                             | 100-125 | 140-199                      | 5.7-6.4  | NA                   |
| Diabetes                                | >= 126  | >= 200                       |          | >=200(with symptoms) |

Reference: Diabetes care 2018:41(suppl.1):S13-S27

- Postprandial glucose level is a screening test for Diabetes Mellitus
- If glucose level is >140 mg/dL and <200 mg/dL, then GTT (glucose tolerance test) is advised.
- If level after 2 hours = >200 mg/dL diabetes mellitus is confirmed.
- Advise HbA1c for further evaluation.

## Test Name Results Units Ref. Range Method Uric Acid 7.5 mg/dL 3.5-7.2 Uricase

## **Interpretation:**

- Uric acid is a chemical created when the body breaks down substances called purines. Purines are normally produced in the body and are also found in some foods and drinks. Foods with high content of purines include liver, anchovies, mackerel, dried beans and peas, and beer. Most uric acid dissolves in blood and travels to the kidneys. From there, it passes out in urine. If your body produces too much uric acid or does not remove enough if it, you can get sick. A high level of uric acid in the blood is called hyperuricemia. This test checks to see how much uric acid you have in your blood. Investigation and monitoring of inflammatory arthritis pain, particularly in big toe (gout)
- · Useful in the investigation of kidney stones
- Aid in diagnosis, treatment, and monitoring of renal failure/disease
- Monitor patients receiving cytotoxic drugs (high nucleic acid turnover)
- Monitor diseases with nucleic acid metabolism and turnover (eg, leukemia, lymphoma, polycythemia)

Result rechecked and verified for abnormal cases

| CLINICAL BIOCHEMISTRY       |         |       |  |            |
|-----------------------------|---------|-------|--|------------|
| Test Name                   | Results | Units | Ref. Range   | Method     |
| Glycated Hemoglobin (HbA1c) | 6.8     | %     | Non Diabetic: < 5.7<br>Pre diabetic: 5.7-6.4<br>Diabetic: >= 6.5 | HPLC       |
| Mean Plasma Glucose         | 148.46  | mg/dL |  | Calculated |

## **Interpretation:**

- Glycated hemoglobins (GHb), also called glycohemoglobins, are substances formed when glucose binds to hemoglobin, and occur in amounts proportional to the concentration of serum glucose. Since red blood cells survive an average of 120 days, the measurement of GHb provides an index of a person's average blood glucose concentration (glycemia) during the preceding 2-3 months. Normally, only 4% to 6% of hemoglobin is bound to glucose, while elevated glycohemoglobin levels are seen in diabetes and other hyperglycemic states
- Mean Plasma Glucose(MPG): This Is Mathematical Calculations Where Glycated Hb Can Be Correlated With Daily Mean Plasma Glucose Level

Correlate Clinically.
