CLINICAL BIOCHEMISTRY				
Test Name	Results	Units	Ref. Range	Method
C-Reactive protein-(CRP)	19.89	mg/L	Upto:6.0	Immunoturbidimetry

#### Interpretation:

C-reactive protein (CRP) is produced by the liver. The level of CRP rises when there is inflammation throughout the body. It is one of a group of proteins called acute phase reactants that go up in response to inflammation. The levels of acute phase reactants increase in response to certain inflammatory proteins called cytokines. These proteins are produced by white blood cells during inflammation.

A positive test means you have inflammation in the body. This may be due to a variety of conditions, including:

- Connective tissue disease
- . Heart attack
- Infection .
- Inflammatory bowel disease (IBD) •
- Lupus
- Pneumonia .
- Rheumatoid arthritis •

HAEMATOLOGY						
FEVER PROFILE						
Test Name	Results	Units	Ref. Range	Method		
MALARIA ANTIGEN (VIVAX & FALCIPARUM)						

Plasmodium Vivax Antigen	Negative	Negative	Immuno Chromatography
Plasmodium Falciparum	Negative	Negative	Immuno Chromatography

#### Note :

• In the gametogony stage, P.Falciparum may not secreted. Such carriers may show falsely negative result.

• This test is used to indicate therapeutic response. Positive test results 5 - 10 days post treatment indicate the posibility of a resistant strain of malaria.

#### Comments :

Malaria is protozoan parasitic infection, prevalent in the Tropical & Subtropical areas of the world. Four species of plasmodium paraties are responsible for malaria infections in human viz. P.Falciparum, p.Vivax, P.Ovale & P.malariae. Falciparum infections are associateed with Cerebral malaria and drug resistance where as vivex infection is associated with high rate of infectivity and relapse. Differentiation between P.Falciparum and P.Vivex is utmost importance for better patient management and speedy recovery.

FEVER PROFILE					
Test Name Results Units Ref. Range Method					

Erythrocyte Sedimentation Rate (ESR)	13	10 or less	Westergren method
--------------------------------------	----	------------	-------------------

**Comments :** ESR is an acute phase reactant which indicates presence and intensity of an inflammatory process. It is never diagnostic of a specific disease. It is used to monitor the course or response to treatment of certain diseases. Extremely high levels are found in cases of malignancy, hematologic diseases, collagen disorders and renal diseases.
