Age/Gender : 54 Years/Female Reg. No : 0312312020018

Referred by : Dr. SELF SPP Code : SPL-CV-172

Referring Customer : V CARE MEDICAL DIAGNOSTICS Collected On : 02-Dec-2023 10:14 AM

Primary Sample : Whole Blood Page 10:08 PM

Primary Sample : Whole Blood Received On : 02-Dec-2023 01:08 PM Sample Tested In : Plasma-NaF(R) Reported On : 02-Dec-2023 03:15 PM

Client Address : Kimtee colony ,Gokul Nagar,Tarnaka Report Status : Final Report

## **CLINICAL BIOCHEMISTRY**

## **GLUCOSE RANDOM (RBS)**

Test Name Results Units Ref. Range Method

Glucose Random (RBS) 100 mg/dL 70-140 Hexokinase (HK)

Interpretation of Plasma Glucose based on ADA guidelines 2018

|             | 3       | 2hrsPlasma<br>Glucose(mg/dL) | HbA1c(%) | RBS(mg/dL)           |
|-------------|---------|------------------------------|----------|----------------------|
| Prediabetes | 100-125 | 140-199                      | 5.7-6.4  | NA                   |
| Diabetes    | > = 126 | >= 200                       | 1        | >=200(with symptoms) |

Reference: Diabetes care 2018:41(suppl.1):S13-S27

- The random blood glucose if it is above 200 mg/dL and the patient has increased thirst, polyuria, and polyphagia, suggests diabetes mellitus.
- As a rule, two-hour glucose samples will reach the fasting level or it will be in the normal range.

| CLINICAL BIOCHEMISTRY       |         |       |  |            |  |
|-----------------------------|---------|-------|--|------------|--|
| Test Name                   | Results | Units | Ref. Range   | Method     |  |
| Glycated Hemoglobin (HbA1c) | 6.6     | %     | Non Diabetic: < 5.7<br>Pre diabetic: 5.7-6.4<br>Diabetic: >= 6.5 | HPLC       |  |
| Mean Plasma Glucose         | 142.72  | mg/dL |  | Calculated |  |

#### **Interpretation:**

- Glycated hemoglobins (GHb), also called glycohemoglobins, are substances formed when glucose binds to hemoglobin, and occur in amounts proportional to the concentration of serum glucose. Since red blood cells survive an average of 120 days, the measurement of GHb provides an index of a person's average blood glucose concentration (glycemia) during the preceding 2-3 months. Normally, only 4% to 6% of hemoglobin is bound to glucose, while elevated glycohemoglobin levels are seen in diabetes and other hyperglycemic states
- Mean Plasma Glucose(MPG): This Is Mathematical Calculations Where Glycated Hb Can Be Correlated With Daily Mean Plasma Glucose Level

Result rechecked and verified for abnormal cases

### **Interpretation:**

- Thyroid gland is a butterfly-shaped endocrine gland that is normally located in the lower front of the neck. The thyroid's job is to make thyroid hormones, which are
  secreted into the blood and then carried to every tissue in the body. Thyroid hormones help the body use energy, stay warm and keep the brain, heart, muscles, and other
  organs working as they should.
- Thyroid produces two major hormones: triiodothyronine (T3) and thyroxine (T4). If thyroid gland doesn't produce enough of these hormones, you may experience symptoms such as weight gain, lack of energy, and depression. This condition is called hypothyroidism.
- Thyroid gland produces too many hormones, you may experience weight loss, high levels of anxiety, tremors, and a sense of being on a high. This is called hyperthyroidism.
- TSH interacts with specific cell receptors on the thyroid cell surface and exerts two main actions. The first action is to stimulate cell reproduction and hypertrophy. Secondly, TSH stimulates the thyroid gland to synthesize and secrete T3 and T4.
- The ability to quantitate circulating levels of TSH is important in evaluating thyroid function. It is especially useful in the differential diagnosis of primary (thyroid) from secondary (pituitary) and tertiary (hypothalamus) hypothyroidism. In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

Correlate Clinically.
