### REPORT

Name : Mrs. RAMA GOLI Sample ID

Age/Gender : 62 Years/Female Reg. No : 0312312160005

Referred by : Dr. SELF SPP Code : SPL-CV-172

Referring Customer : V CARE MEDICAL DIAGNOSTICS Collected On : 16-Dec-2023 08:54 AM

Primary Sample : Whole Blood Received On : 16-Dec-2023 11:44 AM Sample Tested In : Serum Reported On : 16-Dec-2023 04:38 PM

Client Address : Kimtee colony , Gokul Nagar, Tarnaka Report Status : Final Report

### **CLINICAL BIOCHEMISTRY**

### **AROGYAM 1.3 PROFILE**

Test Name	Results	Units	Ref. Range	Method

### C-Reactive protein-(CRP) 2.81 mg/L Upto:6.0 Immunoturbidimetry

#### **Interpretation:**

C-reactive protein (CRP) is produced by the liver. The level of CRP rises when there is inflammation throughout the body. It is one of a group of proteins called acute phase reactants that go up in response to inflammation. The levels of acute phase reactants increase in response to certain inflammatory proteins called cytokines. These proteins are produced by white blood cells during inflammation.

A positive test means you have inflammation in the body. This may be due to a variety of conditions, including:

- Connective tissue disease
- Heart attack
- Infection
- Inflammatory bowel disease (IBD)
- Lupus
- Pneumonia
- Rheumatoid arthritis

### Eventiones in Health Core

Copper	106	μg/dL	80-155	Spectrophotometry
Zinc - Serum	93	μg/dL	80-120	Bromo-Paps

## REPORT

Sample ID

Name : Mrs. RAMA GOLI

Age/Gender : 62 Years/Female Reg. No : 0312312160005 SPP Code : SPL-CV-172

Referred by : Dr. SELF

Referring Customer: V CARE MEDICAL DIAGNOSTICS Collected On : 16-Dec-2023 08:54 AM Primary Sample : Whole Blood : 16-Dec-2023 11:44 AM Received On

Sample Tested In : Serum Reported On : 16-Dec-2023 04:38 PM

Client Address : Kimtee colony ,Gokul Nagar,Tarnaka Report Status : Final Report

### **CLINICAL BIOCHEMISTRY**

### **AROGYAM 1.3 PROFILE**

Test Name	Results	Units	Ref. Range	Method
Vitamin Profile 25 - Hydroxy Vitamin D	33.42	ng/mL	<20.0-Deficiency 20.0-<30.0-Insufficiency 30.0-100.0-Sufficiency >100.0-Potential Intoxicatio	CLIA n
Vitamin B12 (Cyanocobalamin)	582	pg/mL	197 - 771	CLIA

#### **Interpretation:**

This test is most often done when other blood tests suggest a condition called megaloblastic anemia. Pernicious anemia is a form of megaloblastic anemia caused by poor vitamin B12 absorption. This can occur when the stomach makes less of the substance the body needs to properly absorb vitamin B12.

#### Causes of vitamin B12 deficiency include: Diseases that cause malabsorption

- Lack of intrinsic factor, a protein that helps the intestine absorb vitamin B12
- Above normal heat production (for example, with hyperthyroidism)

### An increased vitamin B12 level is uncommon in:

- Liver disease (such as cirrhosis or hepatitis)
- · Myeloproliferative disorders (for example, polycythemia vera and chronic myelogenous leukemia)

#### Interpretation:

- Vitamin D helps your body absorb calcium and maintain strong bones throughout your entire life. Your body produces vitamin D when the sun's UV rays contact your skin. Other good sources of the vitamin include fish, eggs, and fortified dairy products. It's also available as a dietary supplement.
- · Vitamin D must go through several processes in your body before your body can use it. The first transformation occurs in the liver. Here, your body converts vitamin D to a chemical known as 25-hydroxyvitamin D, also called calcidiol.
- The 25-hydroxy vitamin D test is the best way to monitor vitamin D levels. The amount of 25-hydroxyvitamin D in your blood is a good indication of how much vitamin D your body has. The test can determine if your vitamin D levels are too high or too low.
- .The test is also known as the 25-OH vitamin D test and the calcidiol 25-hydroxycholecalcifoerol test. It can be an important indicator of osteoporosis (bone weakness) and rickets (bone malformation).

### Those who are at high risk of having low levels of vitamin D include:

- · people who don't get much exposure to the sun
- · older adults
- people with obesity.
- · dietary deficiency

### **Increased Levels:**

Vitamin D Intoxication

### **CLINICAL BIOCHEMISTRY**

## **AROGYAM 1.3 PROFILE**

AROGYAM 1.3 PROFILE					
Test Name	Results	Units	Ref. Range	Method	
Chroated Homoglobin (HbA4a)	6.0	0/	Non Diabetia: 4 E 7	LIDI C	
Glycated Hemoglobin (HbA1c)	6.0	%	Non Diabetic: < 5.7 Pre diabetic: 5.7-6.4 Diabetic:>= 6.5	HPLC	
Mean Plasma Glucose	125.5	mg/dL		Calculated	

#### **Interpretation:**

- Glycated hemoglobins (GHb), also called glycohemoglobins, are substances formed when glucose binds to hemoglobin, and occur in amounts proportional to the concentration of serum glucose. Since red blood cells survive an average of 120 days, the measurement of GHb provides an index of a person's average blood glucose concentration (glycemia) during the preceding 2-3 months. Normally, only 4% to 6% of hemoglobin is bound to glucose, while elevated glycohemoglobin levels are seen in diabetes and other hyperglycemic states
- Mean Plasma Glucose(MPG): This Is Mathematical Calculations Where Glycated Hb Can Be Correlated With Daily Mean Plasma Glucose Level

Testosterone Total	4.47 ng/d	dL Refer Tal	ble CLIA

5	265-800	10-40				
Adult	241-827	14-76				

• Testosterone is a steroid hormone (androgen) made by the testes in males. Its production is stimulated and controlled by luteinising hormone (LH), which is manufactured in the pituitary gland. In males, testosterone stimulates development of secondary sex characteristics, including enlargement of the penis, growth of body hair and muscle, and a deepening voice. It is present in large amounts in males during puberty and in adult males to regulate the sex drive and maintain muscle mass. Testosterone is also produced by the adrenal glands in both males and females and, in small amounts, by the ovaries in females. The body can convert testosterone to oestradiol, the main sex hormone in females. There is great variability in testosterone levels between men and it is normal for testosterone levels to decline as men get older. Hypogonadism in a male refers to a reduction in sperm and/or testosterone production.

## **CLINICAL BIOCHEMISTRY**

AROGYAM 1.3 PROFILE					
Test Name	Results	Units	Ref. Range	Method	
Liver Function Test (LFT)					
Bilirubin(Total)	0.5	mg/dL	0.2-1.2	Diazo	
Bilirubin (Direct)	0.1	mg/dL	0.0 - 0.2	Diazo	
Bilirubin (Indirect)	0.4	mg/dL	0.2-1.0	Calculated	
Aspartate Aminotransferase (AST/SGOT)	31	U/L	5-48	IFCC with out (P-5-P)	
Alanine Aminotransferase (ALT/SGPT)	22	U/L	0-55	IFCC with out (P-5-P)	
Alkaline Phosphatase(ALP)	129	U/L	40-150	Kinetic PNPP-AMP	
Gamma Glutamyl Transpeptidase (GGTP)	21	U/L	5-55	IFCC	
Protein - Total	6.8	g/dL	6.4-8.2	Biuret	
Albumin	4.5	g/dL	3.4-5.0	Bromocresol purple (BCP)	
Globulin	2.3	g/dL	2.0-4.2	Calculated	
A:G Ratio	1.96	%	0.8-2.0	Calculated	

• Alanine Aminotransferase(ALT) is an enzyme found in liver and kidneys cells. ALT helps create energy for liver cells. Damaged liver cells release ALT into the bloodstream, which can elevate ALT levels in the blood.

1.41

- Aspartate Aminotransferase (AST) is an enzyme in the liver and muscles that helps metabolizes amino acids. Similarly to ALT, elevated AST levels may be a sign of liver damage or liver disease.
- Alkaline phosphate (ALP) is an enzyme present in the blood. ALP contributes to numerous vital bodily functions, such as supplying nutrients to the liver, promoting bone growth, and metabolizing fat in the intestines.
- Gamma-glutamyl Transpeptidase (GGTP) is an enzyme that occurs primarily in the liver, but it is also present in the kidneys, pancreas, gallbladder, and spleen. Higher than normal concentrations of GGTP in the blood may indicate alcohol-related liver damage. Elevated GGTP levels can also increase the risk of developing certain types of cancer.
- **Bilirubin** is a waste product that forms when the liver breaks down red blood cells. Bilirubin exits the body as bile in stool. High levels of bilirubin can cause jaundice a condition in which the skin and whites of the eyes turn yellow- and may indicate liver damage.
- Albumin is a protein that the liver produces. The liver releases albumin into the bloodstream, where it helps fight infections and transport vitamins, hormones, and enzymes throughout the body. Liver damage can cause abnormally low albumin levels.

### **CLINICAL BIOCHEMISTRY**

### **AROGYAM 1.3 PROFILE** Units

Ref. Range

			J		
Thyroid Profile-I(TFT)					
T3 (Triiodothyronine)	91.45	ng/dL	40-181	CLIA	
T4 (Thyroxine)	8.8	μg/dL	3.2-12.6	CLIA	
TSH -Thyroid Stimulating Hormone	2.17	μIU/mL	0.35-5.5	CLIA	

#### Pregnancy & Cord Blood

**Test Name** 

T3 (Triiodothyronine	e):	T4 (Thyroxine)	TSH (Thyroid Stimulating Hormone)
First Trimester	: 81-190 ng/dL	15 to 40 weeks:9.1-14.0 μg/dL	First Trimester : 0.24-2.99 µIU/mL
Second&Third Trimes	ster :100-260 ng/dL		Second Trimester: 0.46-2.95 µIU/mL
			Third Trimester : 0.43-2.78 µIU/mL
Cord Blood: 30-70 ng	/dL	Cord Blood: 7.4-13.0 µg/dL	Cord Blood: : 2.3-13.2 µIU/mL

#### Interpretation:

- Thyroid gland is a butterfly-shaped endocrine gland that is normally located in the lower front of the neck. The thyroid's job is to make thyroid hormones, which are secreted into the blood and then carried to every tissue in the body. Thyroid hormones help the body use energy, stay warm and keep the brain, heart, muscles, and other organs working as they should.
- Thyroid produces two major hormones: triiodothyronine (T3) and thyroxine (T4). If thyroid gland doesn't produce enough of these hormones, you may experience symptoms such as weight gain, lack of energy, and depression. This condition is called hypothyroidism.
- Thyroid gland produces too many hormones, you may experience weight loss, high levels of anxiety, tremors, and a sense of being on a high. This is called hyperthyroidism.
- TSH interacts with specific cell receptors on the thyroid cell surface and exerts two main actions. The first action is to stimulate cell reproduction and hypertrophy. Secondly, TSH stimulates the thyroid gland to synthesize and secrete T3 and T4.
- The ability to quantitate circulating levels of TSH is important in evaluating thyroid function. It is especially useful in the differential diagnosis of primary (thyroid) from secondary (pituitary) and tertiary (hypothalamus) hypothyroidism. In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

Sample Tested In : Serum Reported On : 16-Dec-2023 01:06 PM

Client Address : Kimtee colony , Gokul Nagar, Tarnaka Report Status : Final Report

### **CLINICAL BIOCHEMISTRY**

### **AROGYAM 1.3 PROFILE**

Test Name	Results	Units	Ref. Range	Method	
Iron Profile-I					
Iron(Fe)	76	μg/dL	50-170	Ferene	
Total Iron Binding Capacity (TIBC)	388	μg/dL	250-450	Ferene	
Transferrin	271.33	mg/dL	250-380	Calculated	
Iron Saturation((% Transferrin Saturation)	19.59	%	15-50	Calculated	
Unsaturated Iron Binding Capacity (UIBC)	312	ug/dL	110-370	FerroZine	

#### Interpretation:

- Serum transferrin (and TIBC) high, serum iron low, saturation low. Usual causes of depleted iron stores include blood loss, inadequate dietary iron. RBCs in moderately severe iron deficiency are hypochromic and microcytic. Stainable marrow iron is absent. Serum ferritin decrease is the earliest indicator of iron deficiency if inflammation is absent.
- Anemia of chronic disease: Serum transferrin (and TIBC) low to normal, serum iron low, saturation low or normal. Transferrin decreases with many inflammatory diseases. With chronic disease there is a block in movement to and utilization of iron by marrow. This leads to low serum iron and decreased erythropoiesis. Examples include acute and chronic infections, malignancy and renal failure.
- Sideroblastic Anemia: Serum transferrin (and TIBC) normal to low, serum iron normal to high, saturation high.
- Hemolytic Anemia: Serum transferrin (and TIBC) normal to low, serum iron high, saturation high.
- Hemochromatosis: Serum transferrin (and TIBC) slightly low, serum iron high, saturation very high.
- Protein depletion: Serum transferrin (and TIBC) may be low, serum iron normal or low (if patient also is iron deficient). This may occur as a result of malnutrition, liver disease, renal disease.
- Liver disease: Serum transferrin variable; with acute viral hepatitis, high along with serum iron and ferritin. With chronic liver disease (eg, cirrhosis), transferrin may be low. Patients who have cirrhosis and portacaval shunting have saturated TIBC/transferrin as well as high ferritin.

## REPORT

Name : Mrs. RAMA GOLI Age/Gender : 62 Years/Female

Referred by : Dr. SELF

Referring Customer: V CARE MEDICAL DIAGNOSTICS

Primary Sample : Whole Blood

Sample Tested In : Serum

Client Address : Kimtee colony ,Gokul Nagar,Tarnaka

Sample ID : 24754067

Reg. No : 0312312160005

SPP Code : SPL-CV-172

Collected On : 16-Dec-2023 08:54 AM

Received On : 16-Dec-2023 11:44 AM

Reported On : 16-Dec-2023 01:06 PM

Report Status : Final Report

### **CLINICAL BIOCHEMISTRY**

### **AROGYAM 1.3 PROFILE**

Test Name	Results	Units	Ref. Range	Method
Renal Profile (5)				
Calcium	8.9	mg/dL	8.5-10.1	o-cresolphthalein complexone (OCPC)
Uric Acid	4.06	mg/dL	2.6-6.0	Uricase
Blood Urea Nitrogen (BUN)	8.65	mg/dL	8.0-23.0	Calculated
Creatinine -Serum	0.72	mg/dL	0.60-1.20	Sarcosine oxidase
BUN / Creatinine Ratio	12.01		6 - 22	
Urea-Serum	18.5	mg/dL	17.1-49.2	Glutamate dehydrogenase+Calculation

### **CLINICAL PATHOLOGY**

Test Name	Results	Units	Ref. Range	Method	

### **Complete Urine Analysis (CUE)**

## **Physical Examination**

Colour Pale Yellow Straw to light amber

Appearance Clear Clear

### **Chemical Examination**

Glucose	Negative	Negative	Strip Reflectance
Protein	Absent	Negative	Strip Reflectance
Bilirubin (Bile)	Negative	Negative	Strip Reflectance
Urobilinogen	Negative	Negative	Ehrlichs reagent
Ketone Bodies	Negative	Negative	Strip Reflectance
Specific Gravity	1.015	1.000 - 1.030	Strip Reflectance
Blood	Negative	Negative	Strip Reflectance
Reaction (pH)	6.0	5.0 - 8.5	Reagent strip Reflect

Reaction (pH) 6.0 5.0 - 8.5 Reagent strip Reflectance - Double indicator Principle

Nitrites Negative Negative Strip Reflectance

Leukocyte esterase Negative Negative Reagent Strip Reflectance

Microscopic Examination (Microscopy)

PUS(WBC) Cells 02-03 /hpf 00-05 Microscopy R.B.C. Nil /hpf Nil Microscopic **Epithelial Cells** 01-02 /hpf 00-05 Microscopic Casts Absent Absent Microscopic Absent Absent Microscopic Crystals Nil Nil Bacteria **Budding Yeast Cells** Nil Absent Microscopy

Others - Microscopic

Comments :

Urine analysis is one of the most useful laboratory tests as it identifies a wide range of medical conditions including renal damage, urinary tract infections, diabetes, hypertension and drug toxicity.

Correlate Clinically.

Laboratory is NABL Accredited
