

REPORT

Name	: Master. SAMRAT	Sample ID	: A0012990
Age/Gender	: 9 Years/Male	Reg. No	: 0312401230051
Referred by	: Dr. BINDIYA WADHWA	SPP Code	: SPL-CV-172
Referring Customer	: V CARE MEDICAL DIAGNOSTICS	Collected On	: 23-Jan-2024 08: 29 PM
Primary Sample	: Whole Blood	Received On	: 23-Jan-2024 09: 46 PM
Sample Tested In	: Serum	Reported On	: 23-Jan-2024 10: 45 PM
Client Address	: Kimtee colony ,Gokul Nagar,Tarnaka	Report Status	: Final Report

CLINICAL BIOCHEMISTRY

Test Name	Results	Units	Ref. Range	Method
Total IgE	581.32	IU/mL	0.5-393	CLIA

Interpretation:

- Allergies are a common and chronic condition that involves the body's immune system. Normally, your immune system works to fight off viruses, bacteria, and other infectious agents. When you have an allergy, your immune system treats a harmless substance, like dust or pollen, as a threat. To fight this perceived threat, your immune system makes antibodies called immunoglobulin E (IgE).
- Substances that cause an allergic reaction are called allergens. Besides dust and pollen, other common allergens include animal dander, foods, including nuts and shellfish, and certain medicines, such as penicillin.
- Allergy symptoms can range from sneezing and a stuffy nose to a life-threatening complication called anaphylactic shock. Allergy blood tests measure the amount of IgE antibodies in the blood. A small amount of IgE antibodies is normal. A larger amount of IgE may mean you have an allergy.

Correlate Clinically.

Result rechecked and verified for abnormal cases
Laboratory is NABL Accredited
