If glucose level is >140 mg/dL and <200 mg/dL, then GTT (glucose tolerance test) is advised.
If level after 2 hours = >200 mg/dL distance. We have a first second seco

• If level after 2 hours = >200 mg/dL diabetes mellitus is confirmed.

• Advise HbA1c for further evaluation.

CLINICAL BIOCHEMISTRY				
Test Name	Results	Units	Ref. Range	Method
Uric Acid	6.5	mg/dL	2.6-6.0	Uricase

Interpretation:

- Uric acid is a chemical created when the body breaks down substances called purines. Purines are normally produced in the body and are also found in some foods and drinks. Foods with high content of purines include liver, anchovies, mackerel, dried beans and peas, and beer. Most uric acid dissolves in blood and travels to the kidneys. From there, it passes out in urine. If your body produces too much uric acid or does not remove enough if it, you can get sick. A high level of uric acid in the blood is called hyperuricemia. This test checks to see how much uric acid you have in your blood. Investigation and monitoring of inflammatory arthritis pain, particularly in big toe (gout)
- Useful in the investigation of kidney stones
- Aid in diagnosis, treatment, and monitoring of renal failure/disease
- Monitor patients receiving cytotoxic drugs (high nucleic acid turnover) •
- Monitor diseases with nucleic acid metabolism and turnover (eg, leukemia, lymphoma, polycythemia)

Correlate Clinically.

Result rechecked and verified for abnormal cases Laboratory is NABL Accredited
