# **HAEMATOLOGY**

### **HEALTH PROFILE A-1 PACKAGE**

Test Name Results Units Ref. Range Method

Erythrocyte Sedimentation Rate (ESR) 45 mm/hr 30 or less Westergren method

Comments: ESR is an acute phase reactant which indicates presence and intensity of an inflammatory process. It is never diagnostic of a specific disease. It is used to monitor the course or response to treatment of certain diseases. Extremely high levels are found in cases of malignancy, hematologic diseases, collagen disorders and renal diseases.

Result rechecked and verified for abnormal cases

# **CLINICAL BIOCHEMISTRY**

# **HEALTH PROFILE A-1 PACKAGE**

Test Name Results	Units	Ref. Range	Method
-------------------	-------	------------	--------

Calcium 9.7 mg/dL 8.5-10.1 Arsenazo

#### Comments:

- Calcium in the body is found mainly in the bones (approximately 99%). In serum, Calcium exists in a
  free ionised form and in bound form (with Albumin). Hence, a decrease in Albumin causes lower
  Calcium levels and vice-versa.
- Calcium levels in serum depend on the Parathyroid Hormone.
- Increased Calcium levels are found in Bone tumors, Hyperparathyroidism. decreased levels are found in Hypoparathyroidism, renal failure, Rickets.

Chloride	100	mmol/L	94-110	ISE Direct

#### Interpretation

• The kidneys, located in the retroperitoneal space in the abdomen, are vital for patient health. They process several hundred liters of fluid a day and remove around two liters of waste products from the bloodstream. The volume of fluid that passes though the kidneys each minute is closely linked to cardiac output. The kidneys maintain the body's balance of water and concentration of minerals such as sodium, potassium, and phosphorus in blood and remove waste by-products from the blood after digestion, muscle activity and exposure to chemicals or medications. They also produce renin which helps regulate blood pressure, produce erythropoietin which stimulates red blood cell production, and produce an active form of vitamin D, needed for bone health.

## **CLINICAL BIOCHEMISTRY**

#### **HEALTH PROFILE A-1 PACKAGE** Test Name Results Units Ref. Range Method **Liver Function Test (LFT)** Bilirubin(Total) 0.4 mg/dL 0.2-1.2 Diazo Bilirubin (Direct) 0.1 mg/dL 0.0 - 0.3Diazo Bilirubin (Indirect) mg/dL 0.2-1.0 Calculated 0.3 Aspartate Aminotransferase (AST/SGOT) U/L 5-48 IFCC UV Assay 54 Alanine Aminotransferase (ALT/SGPT) IFCC with out (P-5-P) 19 U/L 0-55 Kinetic PNPP-AMP Alkaline Phosphatase(ALP) U/L 30-120 50 **IFCC** Gamma Glutamyl Transpeptidase (GGTP) 10 U/L 5-55 Protein - Total 6.4 g/dL 6.4 - 8.2**Biuret** Albumin 3.4-5.0 Bromocresol Green (BCG) 4.1 q/dL Globulin 2.3 g/dL 2.0 - 4.2Calculated Calculated A:G Ratio 1.78 0.8 - 2.0% SGOT/SGPT Ratio 2.84

Alanine Aminotransferase(ALT) is an enzyme found in liver and kidneys cells. ALT helps create energy for liver cells. Damaged liver cells release ALT into the bloodstream, which can elevate ALT levels in the blood.

Aspartate Aminotransferase (AST) is an enzyme in the liver and muscles that helps metabolizes amino acids. Similarly to ALT, elevated AST levels may be a sign of liver damage or liver disease.

Alkaline phosphate (ALP) is an enzyme present in the blood. ALP contributes to numerous vital bodily functions, such as supplying nutrients to the liver, promoting bone growth, and metabolizing fet in the intertines

Gamma-glutamyl Transpeptidase (GGTP) is an enzyme that occurs primarily in the liver, but it is also present in the kidneys, pancreas, gallbladder, and spleen. Higher than normal concentrations of GGTP in the blood may indicate alcohol-related liver damage. Elevated GGTP levels can also increase the risk of developing certain types of cancer.

**Bilirubin** is a waste product that forms when the liver breaks down red blood cells. Bilirubin exits the body as bile in stool. High levels of bilirubin can cause jaundice - a condition in which the skin and whites of the eyes turn yellow- and may indicate liver damage.

**Albumin** is a protein that the liver produces. The liver releases albumin into the bloodstream, where it helps fight infections and transport vitamins, hormones, and enzymes throughout the body. Liver damage can cause abnormally low albumin levels.

T4 (Thyroxine)	9.0	μg/dL	3.2-12.6	CLIA	
TSH -Thyroid Stimulating Hormone	4.35	μIU/mL	0.35-5.5	CLIA	

#### Pregnancy & Cord Blood

Client Address

T3 (Triiodothyronine):		TSH (Thyroid Stimulating Hormone)	
First Trimester	: 81-190 ng/dL	15 to 40 weeks:9.1-14.0 μg/dL	First Trimester : 0.24-2.99 µIU/mL
Second&Third Trime	ester :100-260 ng/dL		Second Trimester: 0.46-2.95 µIU/mL
			Third Trimester : 0.43-2.78 µIU/mL
Cord Blood: 30-70 n	g/dL	Cord Blood: 7.4-13.0 µg/dL	Cord Blood: : 2.3-13.2 µIU/mL

#### **Interpretation:**

- Thyroid gland is a butterfly-shaped endocrine gland that is normally located in the lower front of the neck. The thyroid's job is to make thyroid hormones, which are
  secreted into the blood and then carried to every tissue in the body. Thyroid hormones help the body use energy, stay warm and keep the brain, heart, muscles, and other
  organs working as they should.
- Thyroid produces two major hormones: triiodothyronine (T3) and thyroxine (T4). If thyroid gland doesn't produce enough of these hormones, you may experience symptoms such as weight gain, lack of energy, and depression. This condition is called hypothyroidism.
- Thyroid gland produces too many hormones, you may experience weight loss, high levels of anxiety, tremors, and a sense of being on a high. This is called hyperthyroidism.
- TSH interacts with specific cell receptors on the thyroid cell surface and exerts two main actions. The first action is to stimulate cell reproduction and hypertrophy. Secondly, TSH stimulates the thyroid gland to synthesize and secrete T3 and T4.
- The ability to quantitate circulating levels of TSH is important in evaluating thyroid function. It is especially useful in the differential diagnosis of primary (thyroid) from secondary (pituitary) and tertiary (hypothalamus) hypothyroidism. In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

Correlate Clinically.
